PROFESSIONAL SUMMARY

Highly motivated and results-driven Computer Engineering graduate (Cum Laude, GWA: 1.519) with close to 2 years of hands-on freelance development experience. Specializing in building scalable web and mobile applications, I leverage modern frameworks such as React, React Native, Next.js, and Tailwind CSS. Proven ability to manage end-to-end development, successfully delivering 3 mobile applications and 3 websites with strong technical knowledge in database systems, real-time features, and IoT solutions. Seeking a challenging entry-level or junior development role to contribute expertise in front-end development, problem-solving, and innovative project delivery.

WORK BACKGROUND

React Native Developer (Freelance) – Philippines

September 2024 – Present

- Developed three IoT-based mobile applications using React Native (Expo):
 - G-Keep**, a goat monitoring app with geofencing and real-time GPS tracking
 - Pinyaxtract**, an app for monitoring and controlling a fiber-extraction machine for pineapple leaves
 - BalingTech**, a remote-control interface for a cassava chips processing machine
- Integrated **Expo Push Notification** together with **Firestore Admin SDK** to deliver push notifications based on sensor data and event triggers, enhancing user awareness and engagement.
- Designed intuitive and responsive mobile UIs using **NativeWind (Tailwind for RN)**, and animate SVG components to improve user experience.
- Used **Expo CLI** and **EAS CLI** to deploy cross-platform mobile apps with OTA updates and custom configuration.
- Applied **TypeScript** in React Native projects for type-safe component development and better maintainability.

Front-end Developer (Freelance) – Philippines

December 2023 – August 2024

- Designed intuitive UI/UX prototypes using Figma and developed fully responsive, interactive web applications using React, Next.js, and Tailwind CSS.
- Built data-driven dashboards and admin panels with Prisma, PostgreSQL, and Firebase, featuring dynamic charts using Chart.js and real-time sensor monitoring.
- Integrated push notifications based on sensor data thresholds using Firebase Cloud Messaging and third-party APIs.
- Developed IoT functionality by programming ESP32 microcontrollers to send sensor data to Firebase and enable remote device control via the web.
- Deployed production-ready websites using Firebase Hosting with CI/CD workflows, ensuring efficient updates and development cycles.
- Ensured cross-browser compatibility and optimized performance across major devices and browsers.
- Collaborated directly with clients to translate ideas into user-centered solutions, maintaining clean, version-controlled codebases with Git and GitHub.

SKILLS

- Web Development:** HTML, CSS, JavaScript, React, Next.js, Bootstrap, Tailwind CSS
- App Development:** React Native, Expo, Nativewind, Typescript
- Programming Language:** JavaScript, Typescript, C, C#
- Database & ORM Tools:** MySQL, Firebase, Supabase, Prisma
- Version Control Tools:** Git and GitHub
- Design Tools:** Figma and Photoshop
- Soft Skills:** Attention to Detail, Communication Skills, Troubleshoot, Adaptability, Work Collaboratively
- Languages:** Native Filipino Speaker; Proficient in English

EDUCATION

Mindoro State University – Mindoro | Bachelor of Science in Computer Engineering (BSCpE) | Mindoro, PH | July 2023

- GWA: 1.519 (Cum Laude)
- Thesis: E-SPLASH: Fishpond Solar-Powered Paddlewheel Aerator
- Relevant Coursework: Front-end Development, App Development, Web and Graphic Design, IoT Development, Software Engineering
